Objective

The Candela mixed traffic test is designed to measure the access point performance andstability by running multiple traffic on real clients like Android, Linux, Windows, and IOSconnected to the access point. This test allows the user to choose multiple types of traffic likeclient capacity test, web browser test, video streaming test ping test. Along with theperformance measurements are client connection times, Station 4-Way Handshake time, DHCPtimes, and more. The expected behavior is for the AP to be able to handle all types of traffic onthe several stations (within the limitations of the AP specs) and Make sure all clients can run alltypes of traffic.

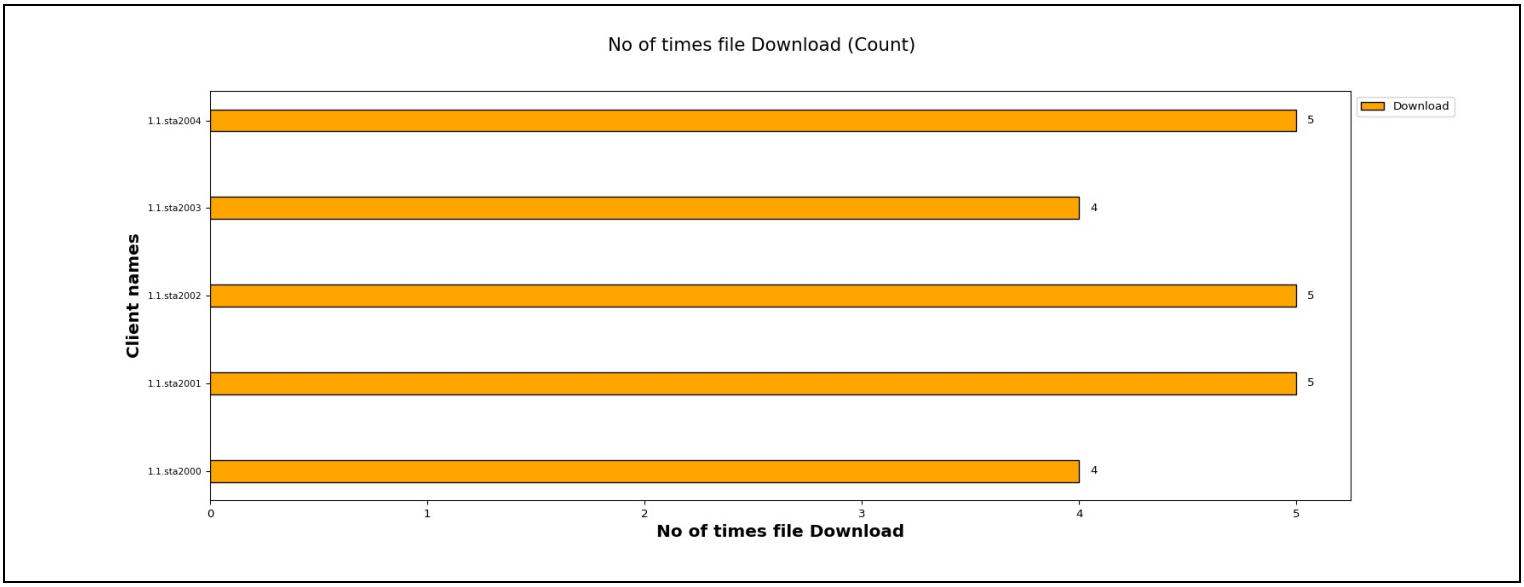
No of times file Downloads

The below graph represents number of times a file downloads for each client. X- axis shows “No of times file downloads and Y-axis shows Client names.



Average time taken to download file

The below graph represents average time taken to download for each client . X- axis shows "Average time taken to download a file " and Y-axis shows Client names.
